## REACTIVE ATTACHMENT DISORDER

This session will provide a definition of Reactive Attachment Disorder (RAD) which is a disorder that severely impairs a child's ability to relate to others in socially healthy and acceptable ways. It effects the development of appropriate and healthy bonding naming the two types of RAD: Inhibited type and disinhibited type. It will further identify causes, symptoms and provide treatment techniques for RAD.

**INSTRUCTOR: CHERYL L. TERRELL, PH.D.**

**CHERYL L. TERRELL, PH.D.** is a clinical therapist, a psychological examiner, a community and staff educator, and a Licensed Professional Counselor. She is a member of the American Psychological Association, a fellow of the American Psychotherapy Association, a member of the American Counseling Association, and a member of the American Association of Christian Counselors.
